The first and most essential step of the current phase II of the PAGES 2k project is to complete the data compilations for each region. Accordingly data collection is an important part of this meeting. And, as you can see on the data map below, large parts of South America, especially the tropical regions, are still empty - so a big effort is needed! While phase I focussed on high-resolution temperature data, we will now also assimilate lower resolution data and an important focus is set on water availability records. A comprehensive database will be the key to the success of this project!

Background

You can help!

What data?
The LOTRED-SA group uses the selection criteria of the PAGES 2k Network:
- Demonstrated relation to climate, but not necessarily quantitative
- At least one numerical age per 500-year interval
- At least one analysis every 200 years
- Must span 100 years during the past 2k

Do you want to contribute to the data collection effort? Here’s what you can do:
1) Share your record!
2) Let us know about records you know that are not on the map yet!
3) Join the data management team of LOTRED-SA!
